PATENT APPLN. NO. 10/743,747
RESPONSE UNDER 37 C.F.R. §1.111

PATENT
NON-FINAL

IN THE CLAIMS:

1. (currently amended) A dialyzer comprising a substantially cylindrical case, a hollow fiber bundle made of a plurality of hollow fiber membranes provided in the case, a gap formed between an inner wall of the case and the hollow fiber bundle, a blood flow path formed by lumens of the hollow fiber membranes, a dialysate flow path formed by the gap between the inner wall of the case and the hollow fiber membranes and gaps between the hollow fiber membranes, and a cylindrical elastic tube inserted in the gap between the inner wall of the case and the hollow fiber bundle and substantially contacting the inner wall of the case, and

wherein a lubricant is provided between an outer surface of the elastic tube and the inner wall of the case;

a rib is formed on an outer circumferential surface of the elastic tube;

a concave portion for receiving the rib and fixing the elastic tube is formed on an inner wall of the case; and

the elastic tube is water-tightly contacted with the inner wall of the case by the elastic force of the tube, thereby securely fixing the elastic tube in the case.
